

Research Interest May 2017

MSc. Buğra Demircioğlu

My research interest is artificial neural networks.

My first project is recognition of handwritten letters converted to jpeg image format. The images are trained with back propagation neural networks. This project is compared with 5 different studies. This project is yielded the better result than the other studies.

My second project is the recognition of the Egyptian scrolls. These scrolls are trained with feed forward neural network. This project is not compared with any recognition project yet.
